## BERODIN WAX AND ACCESSORIES TECHNICAL MANUAL

Products are superior to other wax products. Warmed at low heat, wax is applied just above body temperature, making it gentle, yet effective. The wonderful textures make it less brittle and sticky than traditional waxes. To compliment the wax is a complete line of pre- and post- wax accessories, supplies, and educational DVD's, classes, and home care products to support the service.

### BLUE HARD WAX:

It's applied thicker than soft wax but sets up quickly while remaining flexible. It is used on face, underarms and bikini, Brazilian because it is less irritating on the skin than soft waxes and stronger for course hair.

### BLACK / AQUAMARINE:

Soft wax removed with strips Used for legs, arms, back and chest. This is the perfect "speed wax" product allowing large areas to be covered at one time without fear of it setting up or drying.

### JASMINE OIL:

Pre and post depilatory oil is used under all Berodin waxes to form a protective barrier, preparing the skin for waxing and easy release. Used to remove residue also.

### PLASTIC SPATULA:

Hard nonporous plastic | Ideal for larger areas and used with soft wax. Cuts body waxing time by 50%  
Size: 150mm approx. blade length.

### LAVENDER OIL:

Slightly scented, gentle cleanser for underarms and bikini areas preparing skin for Jasmine Oil.

### NON WOVEN STRIPS:

These strips are strong enough to be used many times before throwing away. The wax doesn't come through the strip, keeping your hands clean during the procedure.
